

UI / UX Design– Task 2

UX Research, User Flow Creation, and Low-Fidelity Wireframing

Selected App: Food Delivery App

Problem Statement

Busy professionals and students struggle to find affordable, healthy meals quickly. They often face hidden delivery fees, long delivery times, and confusing restaurant options.

User Persona

Name: Rohan Mehta

Age: 26

Occupation: Software Engineer

Goals

- Order healthy food quickly
- Receive meals within 30 minutes
- Reorder favorite meals easily

Pain Points

- Too many restaurant choices
- Hidden delivery fees
- Poor order tracking

User Journey Map

Stage	User Action	Feeling	Pain Point
Discovery	Opens the app	Hungry	Too many choices
Search	Filters restaurants	Hopeful	Difficult to compare
Order	Adds food to cart	Satisfied	Hidden charges
Payment	Pays online	Confident	Payment failure concerns
Tracking	Tracks delivery	Excited	Inaccurate ETA

Design Decisions

Element Placement

The search bar is placed at the top of the dashboard, allowing users to quickly find restaurants or dishes. Frequently used actions like cart access and profile are available through the bottom navigation bar.

Action Prioritization

Popular food categories and promotional offers are displayed prominently to help users discover meals quickly. The "Add to Cart" and "Proceed to Pay" buttons are highlighted because they are the primary actions.

Reducing User Confusion

The checkout screen provides a transparent breakdown of item cost, delivery fee, platform fee, discounts, and the final amount. The live order tracking screen clearly shows the current delivery stage and estimated arrival time to reduce uncertainty.
